

SHEFFIELD
FORGEMASTERS

Casting and Forging Solutions for the World's most Complex Engineering Challenges

Offshore Wind Capabilities

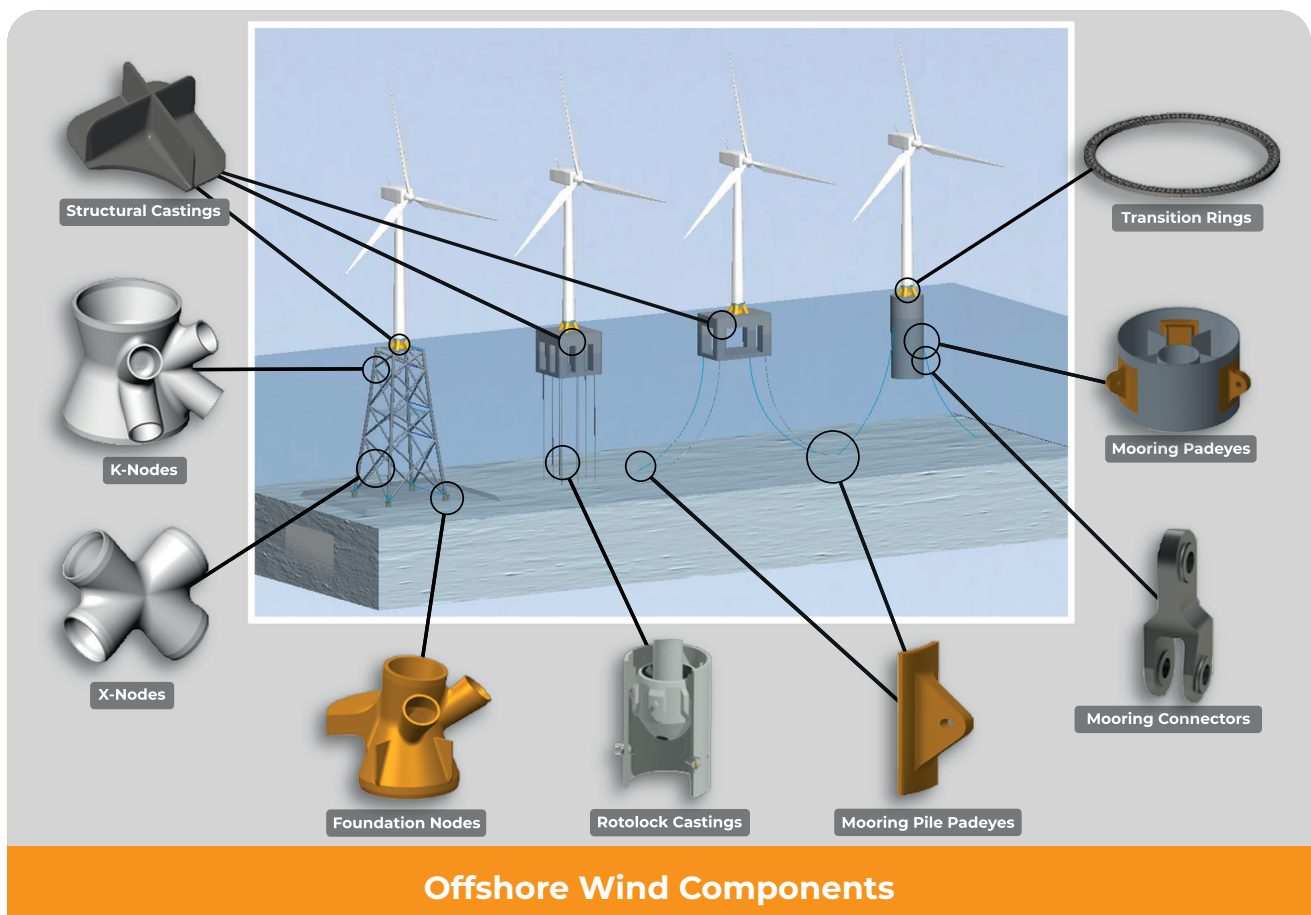

Offshore Wind Capabilities

Sheffield Forgemasters has supplied high integrity cast and forged steel components for demanding offshore applications for over 30 years.

We have some of the most advanced manufacturing, machining and R&D capabilities in the world, allowing us to produce complex finished components from 1 up to 350 tonnes in weight. Our integrated Research Design & Technology team can offer Design for Manufacture services to optimise or integrate your existing component designs.

Below are some examples of subsea products manufactured by Sheffield Forgemasters, for the offshore oil and gas market, which can be easily adapted for offshore floating wind applications.

Proven Technology | 30 Years' Experience | Bespoke Design Solutions

Applications

Jackets | Mooring Systems | Tension Leg Platforms | Semi-Submersible Platforms | Spar Platforms
